

## Homework 2 Problem 3

### Overview

This exercise compared the poll-predicted gap between votes for Obama and Romney and the actual gap. The analysis showed that most polls underestimated the percentage by which Obama votes exceeded Romney votes.

### Useful commands

- Bar chart
  - `plt.bar(np.arange(1,len(ldata)), data)`
  - you can't just put in what data you want bar charted; the first argument has to specify where along the x-axis you want the bars to be located
- Export dataframe to csv
  - `df.to_csv('filename.csv')`
